

# Project Proposal

## Project Title:

Pomodify – A Customizable Pomodoro Productivity Tracker

## Problem Statement:

Students and workers often find it hard to stay focused and manage their time. Many Pomodoro apps are too strict, with little room to adjust and weak tracking features. Because of this, people need a simple web app that makes time management flexible, easy, and more motivating.

## Objectives:

- Build an easy-to-use web app that supports customizable focus sessions.
- Give users a way to record, review, and manage their progress.
- Provide secure accounts so users can log in and track their own data.
- Make sure the design works well on both computers and phones.

## Proposed Solution:

The project, **Pomodify**, will be a web application that lets users set their own Pomodoro cycles by choosing work and break times. It will track completed sessions, show reports, and give insights that encourage consistent focus. Users can manage their own accounts, customize their settings, and view their productivity history. The app will have a simple and responsive design, so it works smoothly on any device. Pomodify is built to be flexible and scalable, allowing future improvements such as links to outside tools. It is designed for students preparing for exams, professionals handling work tasks, and teams that want to improve productivity together.
