👤 Profile	Done	Reyes Simone Jake	
📊 Reports	Done	Ivan Delumen	
📝 My Notes	Done	Ivan Delumen	Inside session
+ New sub-item			

Sprint 9 focused on completing the remaining frontend pages, finalizing modal components, and integrating the backend APIs for authentication, activities, and categories. The team successfully finished all assigned UI pages and modals, and initial API integration for login, activities, and categories was completed and deployed for testing.

### Sprint Retrospective

#### What Went Well

- ✓ All frontend pages were completed.
- ✓ All required modals were successfully designed and implemented:
  - Create/Edit/Delete modals for Activities
  - Create/Edit/Delete modals for Notes
- ✓ API Integration progress was strong:
  - Successful integration of Login API (Auth)
  - Integration of Activity API for CRUD actions
  - Integration of Category API

- Error-handling logic for some modals can still be refined for better UX.

#### What Needs to Be Done (Sprint 10)

- Connect all Frontend pages to APIs (Auth/Profile, Activities, Notes, Pomodoro, Reports/Dashboard)
- Ensure timers, CRUD, search, filters, and modals work with live backend responses.
- Deploy fully functional system.

#### What Could Be Improved

- Some API responses required adjustments; more consistent formatting could speed up frontend integration.
- Deployment cycle took longer due to configuration updates — earlier setup could reduce delays next sprint.
