

Progress Update | Sprint 14
January 3, 2026 | G-Cache
Sprint 14 Percentage Completion: 100%
Project Completion: 57/57 – 100%

Sprint 14 marks the final sprint of Pomodify development. This sprint focused on critical bug fixes across both frontend and backend systems, alongside completing the AI implementation features—specifically Smart To-Do List Suggestions and Smart Onboarding Wizard. The team prioritized stability and feature completion to prepare for production release.

Sprint Retrospective

What went well:

- Completed AI implementation features (Smart To-Do List Suggestions & Smart Onboarding Wizard)
- Improved session timer with drift-proof synchronization, inline editing, and real-time browser tab updates
- Fixed critical bugs in both frontend and backend
- Maintained strong code quality and team collaboration throughout the final sprint

What could be improved:

- Earlier bug identification could have reduced last-minute fixes
- More comprehensive testing in earlier sprints would have caught issues sooner
- Documentation of AI implementation could be more detailed for future maintenance
- Time management around bug fixes vs. feature completion could be better balanced

What needs to be done:

- Console logs cleaning
- Documentation finalization (API docs, user guides, deployment guides)
- Backup for Pomodify Features
- Update the repository
